

POTATO PEELER BEARING SETS

VanMark Peeler Bearing

ZAH248E hardened stainless sleeve
 [ZAH248D sleeve for Model 2700]
ZA237.3A stainless housing
QF247B flanged polymer bearing

EDT SBR indicates 3-piece assembly

Lyco Peeler Bearing

ZAH130A hardened sleeve
ZA237.3A stainless housing
 includes anti-rotation pin
QF247B flanged polymer bearing

Customer must have urethane outer-housing

Peeler bearing assemblies are designed for the discharge-end of the rollers.

- Plane bearing Peeler Bearings are NOT designed to be used on the drive/infeed end.
- Maximum recommended rpm is 350. (At higher speeds, bearings do not last as long.)
- Processing fluid on the output/wet end helps to keep the polymer bearing material cool
- Can change-out components as needed (not necessary to get all new assembly each time that peeler/scrubber brushes are changed)
